- Have knowledge of Adobe XD for designing UI/UX.
- Good in programming and logic building.
- Very good at content writing.
- Exceptional communication skills.
- The ability to follow instructions and deliver quality results

WORK EXPERIENCE

-> **University's Training & Placement Website:** Provided design ideas and suggested better UI/UX for the website. Currently working with the team on this website to make it even better.

-> **'HungerPoint' Food Ordering Web App:** Built using React.js, this app manages all our items in the cart, pulls out data from a database and also adds data to it. Thus, keeping track of all the food items added to the cart providing a very good user experience.

-> **'Quotes' Web App:** Built using React.js, this app lets us add our favourite quotes to the database and we can retrieve our favourite quotes from it and even delete them from the database. This app provides a very smooth user experience.

-> **Expense Tracker Web App:** This web app keeps track of all our expenses and also shows the statistics that which year we spent more.

-> **'Focus' Mobile App:** Built using React Native, this app is platform-independent and is very dynamic. It lets us focus on a particular task providing a timer to complete it. It saves all our activities to the phone's local storage. The user experience is awesome.
